Connecting Stripe x Google Sheets
without another subscription!

Step 1

Open this google sheet, make a copy, and add it to your own drive.
🟩 Stripe x Google Sheets (Free)

Step 2

Watch the following video for instructions on how to set up the Google sheet for your own use.

https://youtu.be/JOv8PpGtKEY

Step 3

I recommend removing any tabs that you don't need, as this will reduce the number of API calls to Stripe and improve the performance of the Google Sheet. You can always come back to the template if you need to add any new sheets in.

If you copy to a totally new Google Sheet it won't work though, as it won't be able to access the script.

Step 4

If you did want to have the data refresh on a schedule, here's a short video showing you how to set that up. You only need to do this one and then all of the tabs will refresh at the same time.

You can watch the video for that here - https://share.descript.com/view/fyQYh7ZFrj1

Note: I am running through a different API (Intercom vs Stripe), however the steps are identical.

Step 5

The free version of api2sheets does have limited capabilities and will only connect to some of the most common Stripe data sources, but most importantly, it will only pull down a small number of results.

If you'd like to have unrestricted access, you'll need to purchase either the standard or PRO versions from api2sheets.com

Step 6

We've taken every precaution to ensure our product is super easy to use, and we also provide detailed step-by-step video instructions. While we are happy to answer some basic questions to help you get set up if anything is not clear, however, if you do need more hands-on support with either Stripe or Google Sheets, then we will charge separately for a consulting call.
I can be reached at josh@supportdept.com.au

Cheers
Josh
